

AI Implementation Roadmap

Software Development Portfolio | Cloud & AI Integration

A strategic plan to integrate Microsoft Azure AI services into existing software solutions, demonstrating the practical application of AI-900 principles.

1. Smart Receipt Scanner Extension

Azure AI Document Intelligence | Kotlin | RoomDB

CORE OBJECTIVE

Enhancing the "Stashed" personal budget planner by automating expense entry through Optical Character Recognition (OCR) and data extraction.

KEY FEATURES

- Automated capture of merchant name, date, and total amount from physical receipts.
- Seamless integration with existing Android SQLite/RoomDB infrastructure.
- Real-time JSON processing from Azure AI endpoints for instant logging.

2. Sentiment Analysis Dashboard

Azure AI Language | PHP | MySQL

CORE OBJECTIVE

Implementing an intelligent feedback loop for the "Pastimes" e-commerce platform to derive business insights from customer reviews.

KEY FEATURES

- Automated classification of user reviews into Positive, Neutral, or Negative categories.
- Visual dashboard displaying customer satisfaction trends over time.
- Triggered alerts for high-priority negative feedback to improve service recovery.

3. AI Academic Assistant

Azure AI Language (Summarization) | Generative AI

CORE OBJECTIVE

A productivity tool designed to assist students in processing large volumes of study material efficiently using Natural Language Processing (NLP).

KEY FEATURES

- Extractive and abstractive summarization of complex academic documents.
- Automatic generation of key term definitions and practice quiz questions.
- Time-saving insights by highlighting core concepts within lecture notes.
